

Testing and Debugging part 1

Debugging...

Debugging is like being the
detective in a crime movie where
you are also the murderer.

-Filipe Fortes

A yellow and black striped caution tape with a yellow label in the center that says "Debugging" in black text.

Debugging

A small blue square icon with a white letter "H" inside.

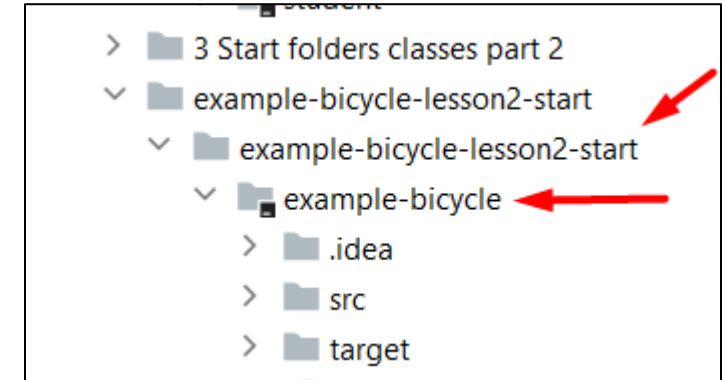

H

- Testing and Debugging = locating and fixing errors
- 5 types:
 - **opening and installation errors:**
 - already visible during the opening of a project
 - **compilation errors:**
 - during programming
 - **testing errors:**
 - tests do not run
 - tests do not succeed
 - **start-up errors:**
 - when you want to run your programme, but it does not start
 - **runtime errors:** during the execution of your program:
 - your programme runs and crashes at the start or during execution
 - **logical errors:** the programme does not give the expected / logical result
- Debugger
 - can help you detect runtime errors and logical errors
 - **not** for installation errors, compilation errors and start-up errors

Opening error

- Opening error appears when opening a project that is not a project:
 - Open IntelliJ
 - Choose File>Open...
 - Click on a project with the special icon:

- If not clicked on

- =>

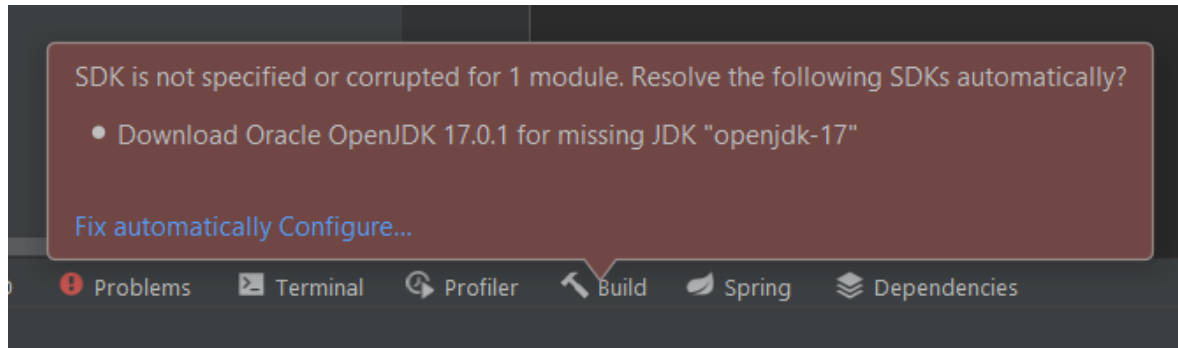

- in stead of..

Installation error

- Following problems may appear when the project you want to open has a different JDK-version than the one of your IntelliJ-installation:
 - In case you get the following error, follow the steps below and on the next slide:

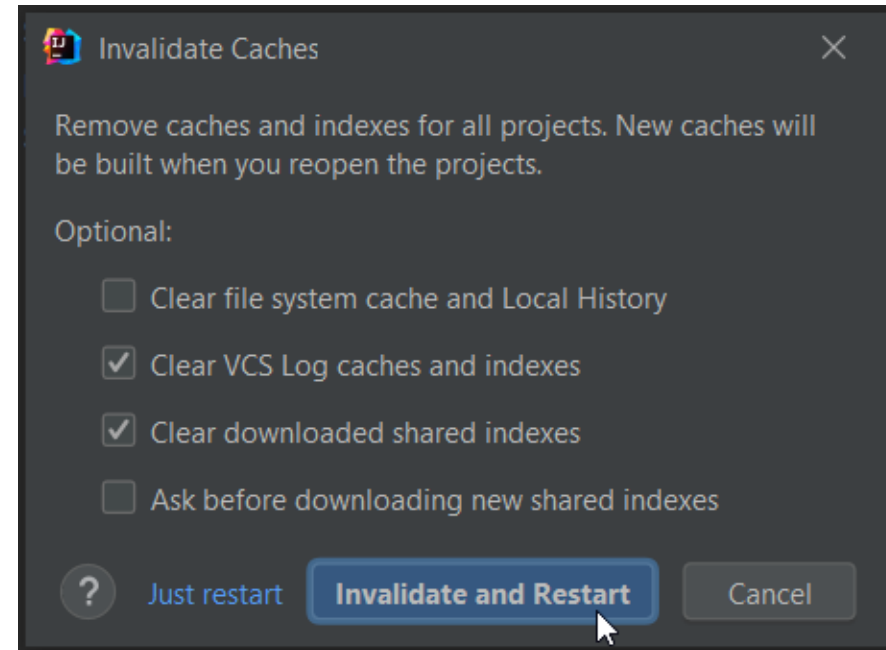

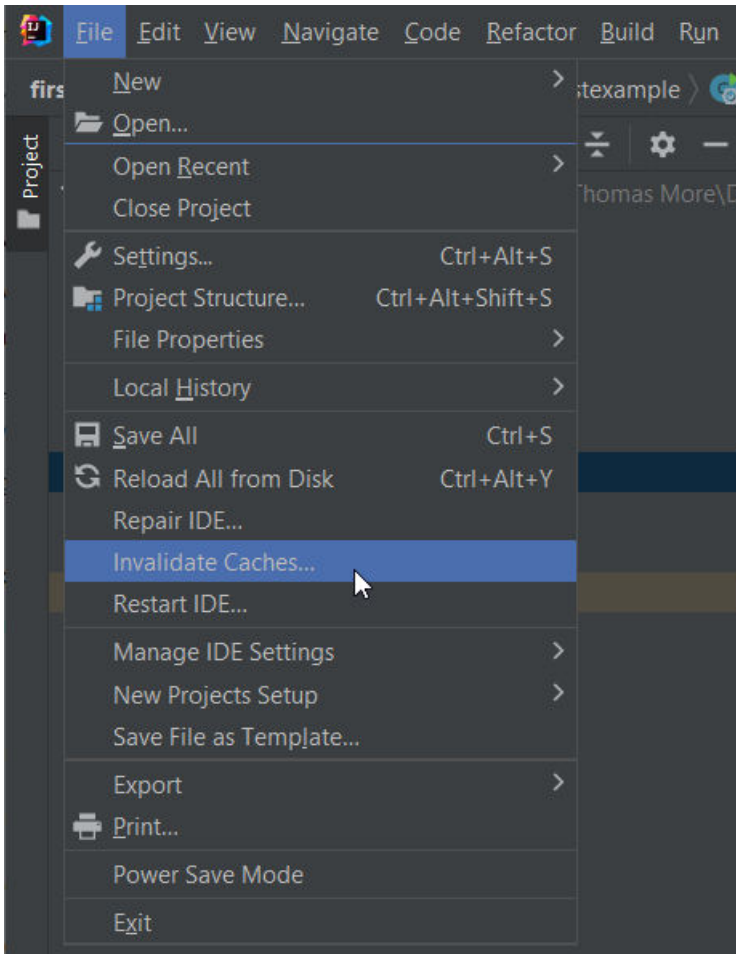

- Click on 'Fix automatically'
- Wait until all downloads have finished (this might take some time), you can follow the progress by looking at the progress bar in the bottom right corner

Installation error

- When the download of the newest Java SDK has finished, click on File > Invalidate Caches..., next click on 'Invalidate and Restart'

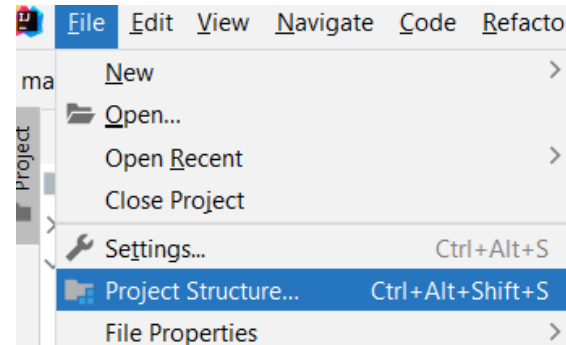

Installation error

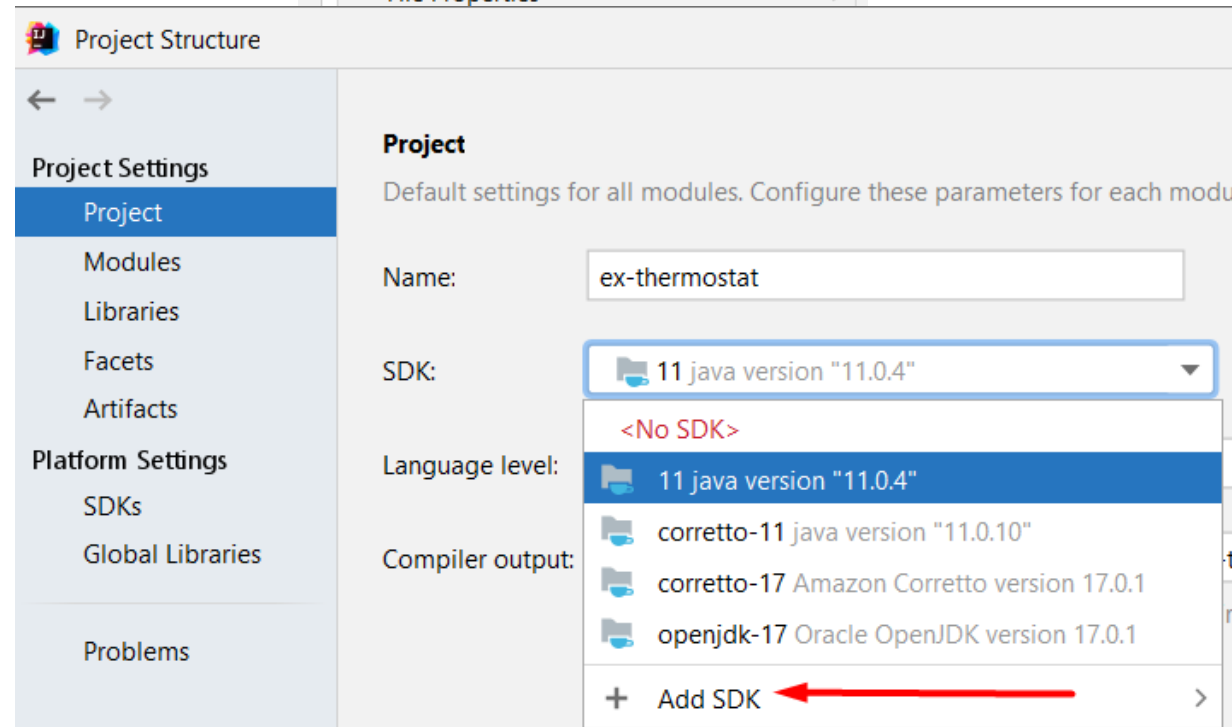

- If 'Fix automatically' doesn't work then

- Choose from menu *File* then *Project Structure*

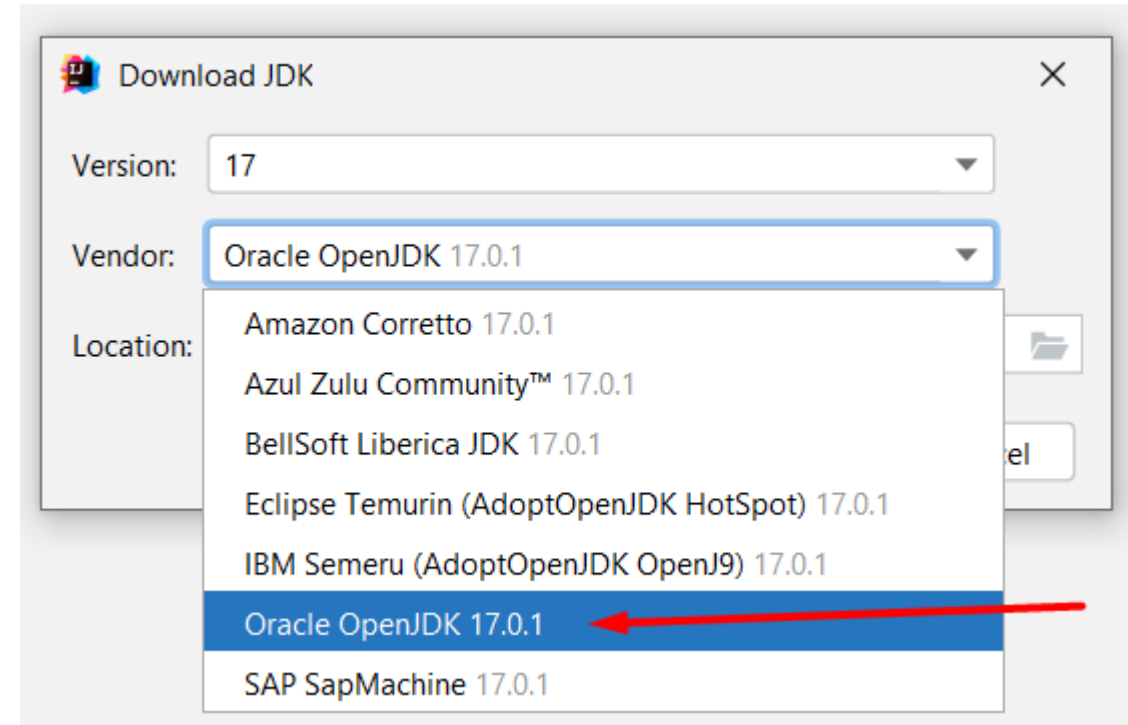

- At *Project SDK* choose *add SDK*.

Installation error

- If you get the error that 'jdk is missing' and 'Fix automatically' doesn't work then
 - Choose *Download JDK* and take the correct version (17!) and Vendor *Oracle OpenJDK 17*.
 - Click *Download* and wait until installation is ready...

Compilation errors

- Knowing WHAT is wrong is often half the solution:
- READ the red text accompanying the error and try to understand it.
- Do not blindly carry out the solutions suggested by IntelliJ. This often causes more problems...
- Some common examples:

```
etPricePerYear() {  
ePerYear = rentalPrice * 12  
2014) {  
rYear *= 0.95;  
}
```

';' expected

Insert; Alt+Shift+Enter More actions... Alt+Enter

- Solution: add a ";" at the end of the line...

Compilation errors

- Some common examples:

```
getInitials("RA") + " ";
```

'getInitials()' in 'fact.it.examplebicycledebugging.model.Student' cannot be applied to '(java.lang.String)'
Add 'String' as 1st parameter to method 'getInitials' Alt+Shift+Enter More actions... Alt+Enter

- the method "getInitials()" does not have a parameter. 2 possible solutions:
 - => delete the parameter "RA" between the brackets
 - => change the method definition in the class so a parameter of the type String is required
- Check the exercise to know what you have to do...

Compilation errors

- Some common examples:

```
Student student = new Student();
student.setForeigner("true");

System.out.println("Student: " + student.getName());
System.out.println("Full name: " + student.getFullname());
System.out.println("Email: " + student.getEmail());
```

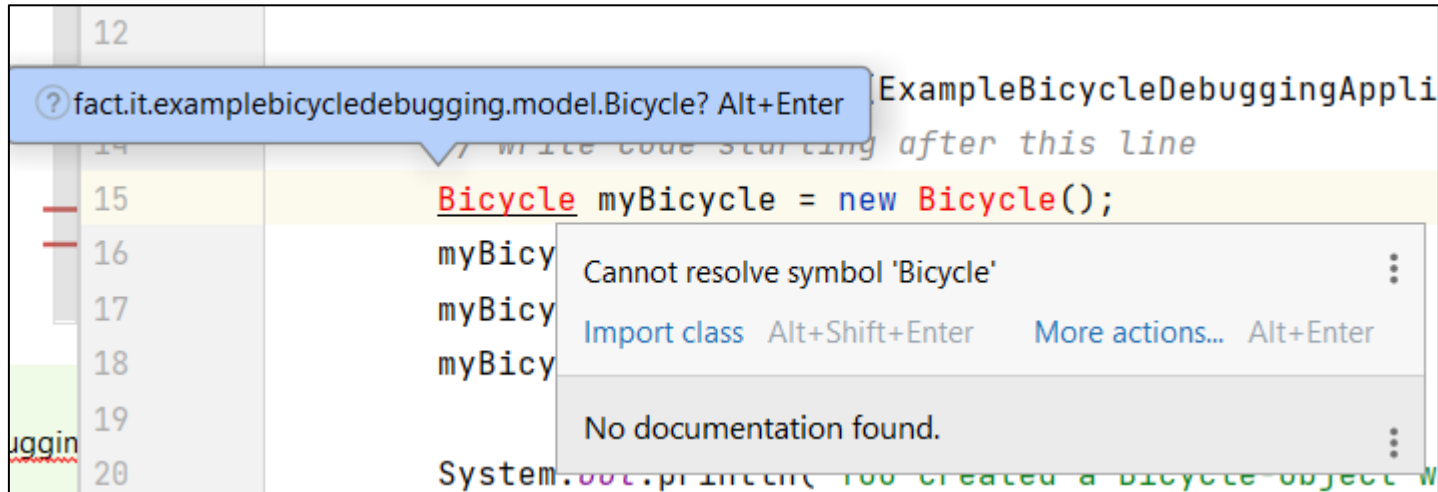

Required type: boolean

Provided: String

Wrap using 'Boolean.parseBoolean()' Alt+Shift+Enter More actions... Alt+Enter

- the method requires a boolean but provides a String ("true").
Solution:
 - setForeigner(true)

- Some common examples:

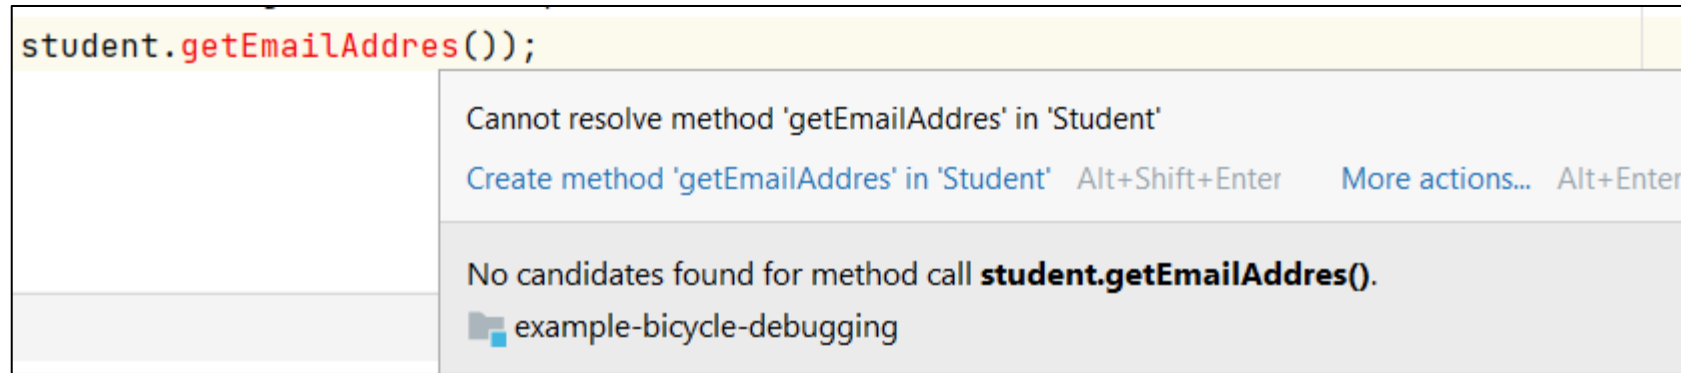

- the class "Bicycle" is not imported in the application
Solution:
 - press Alt+Enter and the class will be imported by IntelliJ

Compilation errors

- Some common examples:

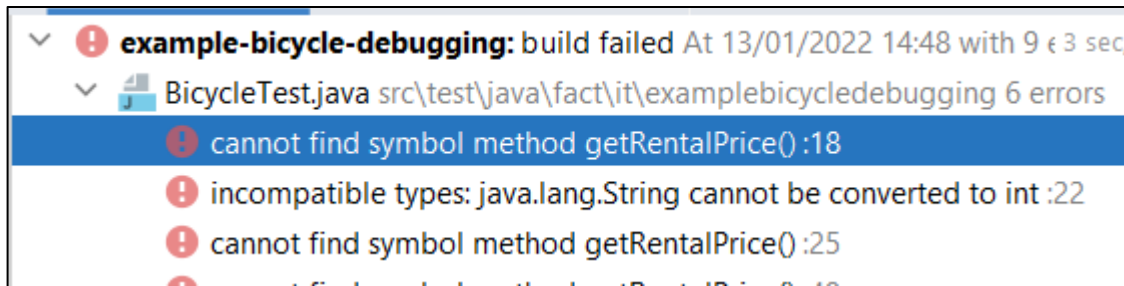

- the method "getEmailAddres()" does not exist. 2 possible solutions:
 - => check the name of the method. If it is the wrong name, correct it getEmailAddress()
 - => create a new method with this name. You can let IntelliJ do this for you by pressing Alt+Shift+Enter BUT be careful! The compilation error will disappear but you possibly create errors later on...

Test errors – tests do not run

- If you haven't programmed all methods OR a wrong method's name is used somewhere in the program, the tests **will not run**.
- E.g.

- Check the names of the methods you had to program:
 - do you have programmed ALL required methods?
 - do they have exactly the same name as required?
 - has the method you programmed the exact signature (type and sequence of the method's parameters) as required?
- **NEVER** change code in a test-file

Test errors – tests do not succeed

- If you coded all methods but you made a mistake in calculation or result:

Tests failed: 2, passed: 6 of 8 tests		
Test Results	467 ms	"C:\Program Files\JetBrains
BicycleTest	467 ms	10:04:43.393 [main] DEBUG c
testGetPricePerYearWithYearSmallerThan2014()	428 ms	10:04:43.407 [main] DEBUG c
testConstructorAndGetters()	6 ms	10:04:43.461 [main] DEBUG c
testGetPricePerYearWithYearGreaterThan2014()	4 ms	10:04:43.480 [main] INFO or
testGetPricePerYearWithYearEqualTo2014()	7 ms	10:04:43.486 [main] DEBUG c
testIncreasePrice()	3 ms	10:04:43.487 [main] DEBUG c
testGetType()	11 ms	10:04:43.488 [main] INFO or

- Correct the mistake by looking at the difference between what "Expected" and "Actual"

testGetPricePerYearWithYearSmallerThan2014()	428 ms	org.opentest4j.AssertionFailedError:
testConstructorAndGetters()	6 ms	Expected :not defined
testGetPricePerYearWithYearGreaterThan2014()	4 ms	Actual :Not defined
testGetPricePerYearWithYearEqualTo2014()	7 ms	Click to see difference

```
type= "Not defined";
```

BicycleTest	467 ms	org.opentest4j.AssertionFailedError:
testGetPricePerYearWithYearSmallerThan2014()	428 ms	Expected :54.0
testConstructorAndGetters()	6 ms	Actual :51.3
testGetPricePerYearWithYearGreaterThan2014()	4 ms	Click to see difference
testGetPricePerYearWithYearEqualTo2014()	7 ms	

```
if (year <= 2014) {
```

Starting error

- Application failed to start when you run the application:

```
*****
APPLICATION FAILED TO START
*****

Description:

Web server failed to start. Port 8080 was already in use.
```

- FIRST look at all open windows of IntelliJ. If one of these windows have a red icon at the top right:  another web application is running. Click on the red square and try to run your application again...
- If this does not work => Change the port that your application uses in the application.properties file:

- A common example => NullPointerException:

```
Exception in thread "main" java.lang.NullPointerException Create breakpoint : Cannot invoke "String.toUpperCase()" because "this.surname" is null
at fact.it.examplebicycledebugging.model.Student.getFullName(Student.java:53)
at fact.it.examplebicycledebugging.ExampleBicycleDebuggingApplication.main(ExampleBicycleDebuggingApplication.java:36)
```

- NullPointerException occurs when a method is called from an object that is "null" (i.e., not instantiated)
- Solution:
 - Look/read which object = null and find the cause...
 - Make sure that the object is instantiated / gets a value... In this case "surname" is empty and needs to get a value.

- Googling "blindly" and doing what is suggested often causes more errors than before
- Only start "Googling" AFTER
 - you have read the error carefully and do not find the solution on that basis
 - you have not found the solution on the basis of the above
- "Smart" googling =
 - give **context** to the error:
 - IntelliJ
 - Java
 - Thymeleaf
 - MySQL
 - ...
 - copy error message literally
 - links at the top
 - stackoverflow

- consulting fellow students / social media / ...
 - compared to the previous steps
 - increased risk of errors
 - less/no learning effect: this source cannot/should not be consulted during evaluation moments => risk of being judged as "fraud"
- official teaching channels (Canvas, Teams, Outlook Mail):
 - 100% sure of correct information
 - learning effect is greater
